

Mouton

Using selected skin of sheep grown in Australia, the mouton mattress pad has excellent features. The fur, composed of thick layers of air, adjusts to changes in temperature or humidity. The pad keeps you warm when it is cold, absorbs the moisture, and lets it off when it is hot and you are sweating. The mouton mattress's surface always feels dry and smooth, making the product available throughout the year.

Four Features of Mouton

1. Disperses body pressure / High resiliency

Wool has wavy fibers that twist like a coil spring. When stretched, a single piece of wool extends by 30% and can return to its original state instantaneously. Due to this resiliency, it becomes fluffy and comfortable with moderate cushioning.

2. Excellent hygroscopicity and desorption

The advantage of mouton is that it absorbs moisture. Its water absorption rate is about 15% of the weight of mouton. In addition, it absorbs moisture deep into the fibers, so the surface is always dry and does not become sticky even when sweating, making it comfortable to use even in summer.

3. Keeps warm

Mouton is densely furred, and the hair has extremely low thermal conductivity and cuts off the outside air. In addition, a lot of air enters between the curled and intricately entwined mouton fibers to increase the heat retention effect. Therefore, you don't feel the chilliness at bedtime, and staying warm through the night.

4. Antifouling / Incombustible

The surface of wool is guarded by scales and has excellent water repellency. In addition, it is a highly flame-retardant natural material that repels dirt.

50 years Mouton

“50 Years Mouton” is proof of high-quality Mouton sheets,
carefully selected from high-grade raw hides grown in the great outdoors of Australia,
which are suitable for making shearling sheets.

It is carefully processed and delivered at Japan's largest shearling specialty factory.

Regular maintenance will restore the texture and elasticity,
allowing you to use it for a long time.
